## Introduction

The province of Newfoundland and Labrador offers almost unlimited opportunities for residents to participate in the recreational cod fishery. There are over $9,600 \mathrm{~km}$ of coastline on the more heavily populated main island and outer islands, and almost $7,900 \mathrm{~km}$ of coastline on the sparsely populated mainland area of Labrador. More than half the population lives in small villages dotting the coastline. With the exception of a small number of communities (e.g., Grand Falls-Windsor, Gander, Deer Lake, Labrador City, Wabush), the larger villages, towns and cities are also on the coastline of the province.

With such close ocean access, anglers can choose to fish in almost any bay or on any coastal stretch within easy reach of their residences. Since the late 1990s, fishing for cod during openings of the recreational fishery has been the pursuit of tens of thousands of resident anglers in the province.

With the 2007 opening of the fishery came a pledge by the Minister of Fisheries and Oceans, Loyola Hearn, to conduct a post-season survey of catch and effort in the recreational cod fishery. It was considered essential, given the number of participants in the fishery, that an assessment of activity and success in the fishery be undertaken, in addition to normal surveillance of the fishing activity by DFO patrols. This report provides highlights, summary statistics and detailed information tables on all aspects of the survey.

## Survey Highlights

In the 2007 recreational cod fishery in Newfoundland and Labrador:
> The season was five weeks long: July 25 to August 19 and September 29 to October 7
> 73,425 anglers participated in the five-week fishery
o 65,443 anglers were 16 years of age and older; 7,982 were under 16 years of age
o $63.9 \%$ of anglers were male; $36.1 \%$ were female
o for anglers 16 years of age and older, males averaged 51 years; females, 47 years
o almost 42\% lived on the Avalon Peninsula
> anglers fished for an estimated 300,240 days, or for 4.1 days on average over the season
o $58 \%$ of days were fished in NAFO sub-division 3L; followed by $25 \%$ in 3 K
o over $41 \%$ of the days fished were by residents of the Avalon Peninsula
o over $29 \%$ of anglers fished only one day during the season
> anglers caught an estimated 1.2 million cod
o they caught an average of almost 16.4 fish each during the fishery
o $47 \%$ caught 5 fish per day fished
o 54\% harvested 10 fish or less
o they caught 4.0 cod per day fished
o cod caught in Trinity, Notre Dame, Bonavista and Conception Bays accounted for two-thirds of the total cod harvest

## Concepts, Terms and Definitions

Following is a glossary of terms and definitions used in the survey and throughout this report:
Recreational Fishing: refers to non-commercial fishing; angling and sport fishing are covered in the definition used by the survey. Note that ceremonial fishing and subsistence fishing are not covered by the survey and are, therefore, not included in any of the estimates presented in this report.

Angler: an individual of any age who fished for cod in the recreational fishery in 2007; the identification of active anglers was based on the information obtained from the results of the survey pre-screening and the responses of individual respondents. A licence to fish for cod in the recreational fishery in 2007 was not required.

Adult Anglers: the adult angler population in 2007 who were 16 years of age and older. Most survey results presented in this report relate to recreational fishing activities of all anglers in NL with some specific tables relating only to adult anglers.

Household: made up of one or more adult anglers who reside in the same dwelling.
Cod Caught: number of cod caught and retained by anglers.
Day Fished: a day or part of a day on which an angler fished for cod.
Cod: refers to Northern cod (gadus morhua)
Wolffish: refers to any of the species of wolffish in Atlantic Canada listed as threatened or of special concern under the Species at Risk Act; namely, northern (threatened), spotted (threatened) and striped (special concern)

NAFO Sub-division: specific geographic boundaries within Canada as determined by the Northwest Atlantic Fisheries Organization in its Convention areas. All data presented by NAFO sub-division refers to where the fishing activity occurred.

Census Division (CD): geographic areas set by Statistics Canada, which are used during the conduct of the Census of Population for Canada. NL has 11 such areas and, for the purposes of sample selection, the two CDs for Labrador were combined (Table 1). Also for purposes of reporting, these CDs were named for general geographical areas of the province (see Map of Newfoundland and Labrador)

Residence areas: for ease of reporting information based on where anglers lived, the 10 CDs were recoded into six major geographical areas, representing specific coastal and associated inland areas of the province (Table 2).

Note:
Resource Management National, Fisheries and Aquaculture Management, DFO, should be cited as the source of data provided, unless otherwise indicated.

## Totals may not add due to rounding.

## Survey Overview

The 2007 Survey of the Recreational Cod Fishery of Newfoundland and Labrador was the first survey specifically designed to collect information on this fishery. In his June $22^{\text {nd }}$ News Release announcing the opening dates of the fishery, the Minister of Fisheries and Oceans, Loyola Hearn, indicated that a post-season survey of the fishery would be conducted. The season was closed as of October $8^{\text {th }}$ and the survey began October $18^{\text {th }}$. Bristol Group of St. John's conducted interviews over a three-week period, ending November $8^{\text {th }}$.

The number of households sampled within each of Statistics Canada's Census Divisions of Newfoundland and Labrador (NL) are provided in the table below:

Table 1 Sample Sizes, by Census Division, 2007

| Census Divisions | Households <br> Sampled |
| :--- | ---: |
| Division 1 - Avalon Peninsula | 1,409 |
| Division 2 - Burin | 404 |
| Division 3 - South Coast | 405 |
| Division 4 - Southwest | 401 |
| Division 5 - West Central | 405 |
| Division 6 - Central | 405 |
| Division 7 - Bonavista | 407 |
| Division 8 - Northeast Coast | 409 |
| Division 9 - Northern Peninsula | 406 |
| Division 10 - Labrador | 404 |
| Total | 5,055 |

For ease of reporting survey results, based on the residence of anglers in the province, the 10 Statistics Canada's Census Divisions were grouped into six geographic or coastal areas as provided below:

Table 2 Sample Sizes, by Residence Area, 2007

| Residence area | Households <br> Sampled |
| :--- | :---: |
| Avalon Peninsula (Div. 1) | 1,409 |
| Burin - South Coast (Div. 2, 3) | 809 |
| West NL - Northern Peninsula (Div. 4, 5 9) | 1,212 |
| Central - NE Coast (Div. 6, 8) | 814 |
| Bonavista - Trinity (Div. 8) | 407 |
| Labrador (Div. 10) | 404 |
| Total | 5,055 |

As shown in Appendix B, the survey collected information on:

- Household composition: males and females, under 16 years of age and those 16 years of age and older and the number of anglers in each of the four household groups
- Fishing activity

0 total days fished for cod by males and females under age 16;
0 total number of cod caught by these anglers (retention was mandatory);
0 the nearest town, bay or NAFO area where most of their activity occurred;
o a randomly selected individual 16 years of age and older who fished for cod was asked:

- the number of days fished;
- the number of cod caught;
- the nearest town, bay or NAFO area where most of their activity occurred;
- if any wolffish were caught when fishing for cod and, if so, the number caught and the number successfully released back into the water; and
- their age (sex was recorded based on the respondent selected).

Appendix A provides a more detailed description of the survey methodology as well as indicators of data quality and statistical reliability of key variables.

## Survey Results

Summary statistics are presented in this section of the report. More detailed tables with information by residence area are presented in Appendix C.

## Angler Profile

Over $41 \%$ of cod anglers lived on the Avalon Peninsula, with another $22.6 \%$ living in the Central and NE coast areas of the province. Given that almost 50\% of all households in the province are on the Avalon Peninsula, the preponderance of anglers in this area was somewhat expected. As well, due to the limited access to coastal waters for most large communities in Labrador, the low percentage of cod anglers resident in Labrador was equally expected (Table 3).

Table 3 Number of anglers who fished for cod, by age category, by residence area.

| Residence Area | Anglers < 16 | Anglers 16+ | Total | $\%$ |
| :--- | ---: | ---: | ---: | ---: |
|  |  |  |  |  |
| Avalon Peninsula | 3,447 | 27,193 | 30,641 | 41.7 |
| Burin-South Coast | 432 | 4,949 | 5,380 | 7.3 |
| West NL- N. Peninsula | 739 | 5,956 | 6,695 | 9.1 |
| Central-NE Coast | 1,942 | 14,616 | 16,558 | 22.6 |
| Bonavista-Trinity | 1,151 | 10,599 | 11,750 | 16.0 |
| Labrador | 271 | 2,130 | 2,401 | 3.3 |
| Total |  |  |  |  |

About 55\% of cod anglers fished in NAFO sub-division 3L, with an additional $25 \%$ fishing in NAFO sub-division 3K (Table 4). With the provincial population living adjacent to NAFO subdivision 3L, the numbers of anglers fishing in this area was not surprising. However, the number of anglers fishing in sub-division 3 K is slightly disproportionate to the population adjacent to this area (about $17 \%$ of the population lives adjacent to 3 K ). A check of anglers fishing in this subdivision showed that $22 \%$ of anglers fishing in this coastal area were visiting from other residence areas of the province. By contrast, just over 5\% of anglers fishing in sub-division 3L lived outside the coastal areas adjacent to the sub-division.

Table 4 Number of anglers who fished for cod, by age category, by NAFO sub-division of activity.

| NAFO Sub-Division | $\mathbf{1 6}$ | $\mathbf{1 6 +}$ | Total | $\%$ |
| :--- | ---: | ---: | ---: | ---: |
|  |  |  |  |  |
| 2J | 109 | 1,046 | 1,155 | 1.6 |
| 3K | 2,152 | 16,495 | 18,648 | 25.4 |
| 3L | 4,538 | 36,011 | 40,549 | 55.2 |
| 3Pn | 86 | 965 | 1,051 | 1.4 |
| 3Ps | 600 | 5,889 | 6,489 | 8.8 |
| 4R | 496 | 5,037 | 5,533 | 7.5 |
| Total | 7,982 | 65,443 | 73,425 |  |

When compared to the general population, the representation of anglers younger than 35 years of age was lower than that found in the general population (Chart 1). Anglers under 35 represented about $23 \%$ of the angling population while this age group in the general population accounted for almost 40\% of individuals in the province. For anglers between 35 and 64, however, their representation was considerably higher than individuals in this age group in the general population (64\% compared to 46\%). Anglers 65 years of age and over were fairly representative of that age group in the general population.

Chart 1 Comparison of the general and angling populations, by age group, 2007

Source: Statistics Canada, 2006 Census of Canada, Cat. No. 97-551-X2006013

## Sex Profile

Males made up less than 49\% of the population of NL (Table 5). About 11\% of all cod anglers were < 16. In all residence areas except two, male and female anglers had lower representation than at the provincial level. For the two residence areas where this was not the case, Central-NE Coast and Bonavista-Trinity, the representation of male and female anglers was considerably higher than at the provincial level.

Table 5 Angler numbers and their representation in the population, by residence area.

| Residence area | Males |  |  | Females |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  | Population | Anglers | $\%$ | Population | Anglers | $\%$ |
|  |  |  |  |  |  |  |
| Avalon Peninsula | 120,229 | 19,244 | 16.0 | 129,395 | 11,397 | 8.8 |
| Burin-South Coast | 19,772 | 3,632 | 18.4 | 20,403 | 1,748 | 8.6 |
| West NL- N. Peninsula | 39,126 | 4,751 | 12.1 | 41,313 | 1,944 | 4.7 |
| Central-NE Coast | 36,920 | 10,328 | 28.0 | 38,586 | 6,230 | 16.1 |
| Bonavista-Trinity | 17,480 | 7,525 | 43.0 | 18,193 | 4,225 | 23.2 |
| Labrador | 12,208 | 1,472 | 12.1 | 11,844 | 929 | 7.8 |
|  |  |  |  |  |  |  |
| Total | 245,735 | 46,952 | 19.1 | 259,735 | 26,473 | 10.2 |

Of all anglers who fished for cod in 2007 almost 64\% were male (Table 6). The highest representation of male anglers compared to female anglers was in the West NL-N. Peninsula residence area of the province. Other than in this residence area, the proportions of male and female anglers in the other residence areas were closer to the provincial levels.

Table 6 Number of anglers fishing for cod, by age category and sex, by residence area.

| Residence area | Males |  |  |  | Females |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  | $<\mathbf{1 6}$ | $\mathbf{1 6 +}$ | Total | $<\mathbf{1 6}$ | $\mathbf{1 6 +}$ | Total | anglers |
|  |  |  |  |  |  |  |  |
| Avalon Peninsula | 2,028 | 17,216 | 19,244 | 1,419 | 9,977 | 11,397 | 30,641 |
| Burin-South Coast | 255 | 3,377 | 3,632 | 176 | 1,571 | 1,748 | 5,380 |
| West NL- N. Peninsula | 538 | 4,213 | 4,751 | 201 | 1,743 | 1,944 | 6,695 |
| Central-NE Coast | 1,234 | 9,093 | 10,328 | 708 | 5,523 | 6,230 | 16,558 |
| Bonavista-Trinity | 740 | 6,785 | 7,525 | 412 | 3,814 | 4,225 | 11,750 |
| Labrador | 193 | 1,280 | 1,472 | 78 | 851 | 929 | 2,401 |
|  |  |  |  |  |  |  |  |
| Total | 4,988 | 41,964 | 46,952 | 2,994 | 23,479 | 26,473 | 73,425 |
| $\%$ | 10.6 | 89.4 | $\mathbf{6 3 . 9}$ | 11.3 | 88.7 | $\mathbf{3 6 . 1}$ |  |

As noted above, the greatest number of anglers who fished for cod in 2007 in NL, fished in NAFO sub-division 3L. This behaviour was consistent among all four age-sex groups of anglers. The lowest number of participants in 2007 was in NAFO sub-division 3Pn, the smallest in area of all sub-divisions in NL (Table 7). And despite the vast area covered by NAFO sub-division 2J, as would be expected due its remoteness and the low population in areas adjacent to the subdivision, the number of participants was just marginally higher than in sub-division 3Pn.

Table 7 Number of anglers fishing for cod, by age category and sex, by NAFO sub-division of activity.

| NAFO Sub-Division | Males |  |  | Females |  |  | All anglers |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | < 16 | 16 + | Total | $<16$ | 16 + | Total |  |
| 2 J | 83 | 646 | 728 | 26 | 400 | 426 | 1,155 |
| 3K | 1,336 | 10,078 | 11,414 | 816 | 6,418 | 7,234 | 18,648 |
| 3L | 2,862 | 22,730 | 25,592 | 1,676 | 13,281 | 14,957 | 40,549 |
| 3Pn | 69 | 703 | 773 | 17 | 261 | 278 | 1,051 |
| 3Ps | 327 | 4,343 | 4,670 | 273 | 1,546 | 1,819 | 6,489 |
| 4R | 310 | 3,464 | 3,775 | 186 | 1,573 | 1,759 | 5,533 |
| Total | 4,988 | 41,964 | 46,952 | 2,994 | 23,479 | 26,473 | 73,425 |

## Age Profile

Detailed ages were collected from anglers aged 16 years of age and older (Table 8). Adult male anglers averaged 51.2 years of age, while adult female anglers were more than 4 years younger, averaging 47.0 years of age. The adult anglers with the highest average ages, for both males and females, at 54.0 and 51.9 years respectively, lived in the Burin-South Coast area (Table 4.6). They were closely followed by anglers residing in the Bonavista-Trinity area, with the average age for male anglers at 53.8 and female anglers at 51.2. The youngest anglers participating in the 2007 NL recreational cod fishery lived in Labrador, with males averaging 46.3 years and females averaging 36.4 years.

Table 8 Average ages of cod anglers 16+ fishing for cod, by sex, by residence area.

| Residence area | Sex of angler |  |  |
| :--- | :---: | :---: | :---: |
|  | Male | Female |  |
|  |  |  |  |
| Avalon Peninsula | 48.9 | 44.5 | 47.3 |
| Burin-South Coast | 54.0 | 51.9 | 53.4 |
| West NL- N. Peninsula | 52.7 | 48.1 | 51.3 |
| Central-NE Coast | 52.5 | 48.6 | 51.0 |
| Bonavista-Trinity | 53.8 | 51.2 | 52.9 |
| Labrador | 46.3 | 36.4 | 42.4 |
| Total | 51.2 | 47.0 | 49.7 |

As would be expected, anglers fishing in NAFO sub-division 2J, bordering on Labrador, were the youngest of all anglers based on the area fished, averaging 46.0 years for males and 42.0 years for females (Table 9). Male anglers fishing in NAFO sub-division 4R were the oldest on average at 53.4 years of age. Female anglers fishing in NAFO sub-division 3Pn were the oldest, averaging 50.8 years on average. As can be seen in Chart 2, of all anglers by sex and age group, the greatest proportion of anglers, 15.5\%, were males in the 55 to 64 years of age group. These male anglers represented $24 \%$ of all male anglers. The highest proportion of female anglers, 8.7\%, was in the 45 to 54 years of age group, representing $24 \%$ of all female anglers.

Table 9 Average age of cod anglers 16+, by sex, by NAFO sub-division of activity.

| NAFO Sub-division | Sex of angler |  |  |
| :--- | :---: | :---: | :---: |
|  | Male | Female |  |
| 2J | 46.0 | 42.0 |  |
| 3K | 51.7 | 46.6 | 44.5 |
| 3L | 50.8 | 47.1 | 49.7 |
| 3Pn | 46.6 | 50.8 | 49.4 |
| 3Ps | 52.2 | 50.0 | 47.8 |
| 4R | 53.4 | 46.0 | 51.6 |
|  |  |  | 51.1 |
| Total | 51.2 | 47.0 | 49.7 |

Chart 2 Distribution of cod anglers by sex and age-group.

## Fishing Effort

The 2007 recreational cod fishery was open for a total of 35 days (July 25 to August19; September 29 to October 7). Overall, anglers fished what might be considered a low 4.1 days on average over the season (Table 10). The lowest average number of days fished was by anglers living in the West NL-N. Peninsula area of the province. Those anglers residing in the BonavistaTrinity area fished the highest average number of days, at 4.7 days per angler.

As would be expected, anglers who lived on the Avalon Peninsula spent the highest number of days fishing for cod, totalling over 124,000 days. The next highest number of days fished was by anglers residing in the Central-NE Coast area. The average number of days fished by anglers residing in three residence areas, Avalon Peninsula, Burin-South Coast and Central-NE Coast were all the same; all fished the provincial average of 4.1 days.

Table 10 Number and average days fished by age group, by residence area.

| Residence area | Days fished |  |  | Average days fished |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | <16 | 16 + | Total | <16 | 16 + | Total |
| Avalon Peninsula | 9,626 | 114,677 | 124,303 | 2.8 | 4.2 | 4.1 |
| Burin-South Coast | 1,662 | 20,335 | 21,998 | 3.9 | 4.1 | 4.1 |
| West NL- N. Peninsula | 2,280 | 20,137 | 22,416 | 3.1 | 3.4 | 3.3 |
| Central-NE Coast | 5,207 | 62,629 | 67,836 | 2.7 | 4.3 | 4.1 |
| Bonavista-Trinity | 3,040 | 52,121 | 55,161 | 2.6 | 4.9 | 4.7 |
| Labrador | 826 | 7,700 | 8,526 | 3.0 | 3.6 | 3.6 |
| Total | 22,641 | 277,599 | 300,240 | 2.8 | 4.2 | 4.1 |

Overall angling pressure was greatest in NAFO sub-division 3L, where anglers spent a total of over 175,000 days fishing in 2007 (Table 11). Their fishing effort in this sub-division, on average 4.3 days, exceeded the provincial average of 4.1 days. The lowest number of days fished were in NAFO sub-division 2J, with just over 3,000 days being fished, or an average of 2.7 days per angler.

Table 11 Days fished and average days by age group, by NAFO sub-division of activity.

| NAFO <br> sub-division | Days fished |  |  | Average days fished |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  | $\mathbf{< 1 6}$ | $\mathbf{1 6 +}$ | Total | $\mathbf{1 6}$ | $\mathbf{1 6 +}$ | Total |
|  |  |  |  |  |  |  |
| 2J | 294 | 2,770 | 3,065 | 2.7 | 2.6 | 2.7 |
| 3K | 5,405 | 69,933 | 75,338 | 2.5 | 4.2 | 4.0 |
| 3L | 13,290 | 162,115 | 175,404 | 2.9 | 4.5 | 4.3 |
| 3Pn | 328 | 3,777 | 4,105 | 3.8 | 3.9 | 3.9 |
| 3Ps | 1,611 | 23,151 | 24,762 | 2.7 | 3.9 | 3.8 |
| 4R | 1,713 | 15,853 | 17,567 | 3.5 | 3.1 | 3.2 |
| Total | 22,641 | 277,599 | 300,240 | 2.8 | 4.2 | 4.1 |

As can be seen in Chart 3, just over 18,000, or $27.8 \%$ of the adult angling population, fished for just one day in the 2007 recreational cod fishery. The numbers of anglers fishing 2 days through 5 days fell off from almost 11,000 fishing for 2 days to almost 5,600. Almost 10,000 anglers fished between 6 and 10 days each, while another almost 4,850 anglers fished for 11 days or more. The highest number of days fished by any angler in the 2007 recreational cod fishery was 20 days.

Chart 3 Distribution of days fished for cod by number of participating adult anglers.

## Harvest

## Cod

In 2007, anglers of all ages caught 1.2 million cod in the NL recreational cod fishery (Table 12). As indicated above, anglers under 16 years of age accounted for about 11\% of the angling population. These anglers caught an average of about 10 fish each, totalling just over 78,000 cod and accounting for only about $6.5 \%$ of the total catch. Anglers 16 years of age and older caught about 17 fish on average each, with a total catch of just over 1.1 million cod being harvested. Anglers under 16 years of age living in the Burin-South Coast area caught the most cod on average, at almost 14 fish each, while those living in the West NL-N. Peninsula area caught the fewest on average at about 8 fish each.

Table 12 Number and average cod caught by age category, by residence area.

| Residence area | Cod caught |  |  | Average cod caught |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  | $<\mathbf{1 6}$ | $\mathbf{1 6 +}$ | Total | $\mathbf{< 1 6}$ | $\mathbf{1 6 +}$ | Total |
|  |  |  |  |  |  |  |
| Avalon Peninsula | 37,818 | 453,712 | 491,531 | 11.0 | 16.7 | 16.0 |
| Burin-South Coast | 5,820 | 89,630 | 95,450 | 13.5 | 18.1 | 17.7 |
| West NL- N. Peninsula | 5,655 | 73,495 | 79,150 | 7.7 | 12.3 | 11.8 |
| Central-NE Coast | 15,922 | 246,953 | 262,875 | 8.2 | 16.9 | 15.9 |
| Bonavista-Trinity | 9,835 | 233,655 | 243,489 | 8.5 | 22.0 | 20.7 |
| Labrador | 2,984 | 31,190 | 34,174 | 11.0 | 14.6 | 14.2 |
| Total | 78,034 | $1,128,635$ | $1,206,669$ | 9.8 | 17.2 | 16.4 |

Adult anglers (those 16+) living in the Bonavista-Trinity area caught the most cod on average at 22 fish each. The total catch for these anglers accounted for almost 234,000 cod, or almost 21\% of the total catch by adult anglers. Adult anglers living in the West NL-N. Peninsula had the lowest average harvest of just over 12 fish each. Their total catch of under 73,500 fish accounted for around $6.5 \%$ of the total cod harvest, Only adult anglers living in Labrador accounted for fewer fish being harvested in the 2007 recreational cod fishery, although anglers harvested almost 15 fish each.

Over $60 \%$ of all cod caught was harvested from NAFO sub-division 3L, with an average of 18 fish caught by each angler fishing in this sub-division (Table 13). Anglers under 16 years of age caught about 49,600 cod in sub-division 3L, accounting for almost 64\% of all cod harvested by younger anglers. The lowest number of cod caught in any NAFO sub-division was 11,555 fish, or an average of 10 per angler, in sub-division 2 J . These fish represented less than $1 \%$ of the total number of cod harvested in the 2007 Newfoundland and Labrador recreational cod fishery.

It should be noted that the daily personal limit for cod in the 2007 recreational fishery was 5 fish. As indicated earlier, the total number of days the fishery was open was 35. In total, therefore, anglers could have taken 175 fish each. Given there were over 73,400 anglers who fished, the theoretical total harvest would have been about 12,845,000 cod. The harvest estimated from the survey represents less than 10\% of the total theoretical harvest, demonstrating a responsible, tempered harvest for the 2007 recreational cod fishery.

Table 13 Number and average cod caught by age category, by NAFO sub-division of activity.

| NAFO <br> sub-division | Cod caught |  |  | Average cod caught |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  | $<\mathbf{1 6}$ | $\mathbf{1 6 +}$ | Total | $\mathbf{1 6}$ | $\mathbf{1 6 +}$ | Total |
|  |  |  |  |  |  |  |
| 2J | 593 | 10,962 | 11,555 | 5.5 | 10.5 | 10.0 |
| 3K | 17,230 | 263,564 | 280,794 | 8.0 | 16.0 | 15.1 |
| 3L | 49,649 | 677,164 | 726,813 | 10.9 | 18.8 | 17.9 |
| 3Pn | 722 | 17,402 | 18,124 | 8.3 | 18.0 | 17.2 |
| 3Ps | 5,378 | 102,211 | 107,589 | 9.0 | 17.4 | 16.6 |
| 4R | 4,462 | 57,332 | 61,794 | 9.0 | 11.4 | 11.2 |
| Total |  |  |  |  |  |  |

Chart 4 Distribution of adult anglers by the number of cod caught.

As can be seen in Chart 4, over 19,000 adult anglers (29.6\% of all anglers) caught between 1 and 5 fish each in 2007. About 3,200 adult anglers (<5\%) took more than 50 fish each. Although anglers could have taken 175 fish for the season, the maximum number of cod taken was 140 fish by an estimated 50 anglers. Again, activity by anglers demonstrated a responsible exploitation of the recreational cod fishery.

Anglers caught an average of 4 fish per day, or 1 less than the limit to which they were entitled (Table 14). Younger anglers averaged 3.4 fish each per day, with those living on the Avalon Peninsula taking the highest number of cod per day per angler at 3.9 fish each. The lowest number of cod taken per day by younger anglers was by those residing in the West NL-N. Peninsula area of the province ( 2.5 fish per day). Adult anglers living in the Bonavista-Trinity area took the most cod per day on average at 4.4 fish, while those living in the West NL-N. Peninsula area taking the lowest at 3.6 fish each per day.
Table 14 Average number of cod caught per day, by age category, by residence area.

| Residence area | Cod catch per day |  |  |
| :--- | ---: | ---: | ---: |
|  | $<\mathbf{1 6}$ | $\mathbf{1 6}+$ | Total |
| Avalon Peninsula |  |  |  |
| Burin-South Coast | 3.9 | 4.0 | 4.0 |
| West NL- N. Peninsula | 3.5 | 4.4 | 4.3 |
| Central-NE Coast | 2.5 | 3.6 | 3.5 |
| Bonavista-Trinity | 3.1 | 3.9 | 3.9 |
| Labrador | 3.2 | 4.5 | 4.4 |
|  | 3.6 | 4.1 | 4.0 |
| Total | 3.4 | 4.1 | 4.0 |

Younger anglers fishing in NAFO sub-division 2 J harvested the fewest cod per day, reporting just 2 fish per day per angler (Table 15). In contrast, younger anglers fishing in NAFO sub-division 3L took almost 4 cod each per day fished. In the more heavily fished NAFO sub-divisions (3K, 3L), adult anglers caught around 4 fish each per day fished. Despite its relatively small area, adult anglers in 3Pn reported taking the highest number of cod per day each at 4.6 fish. Those adult anglers fishing in NAFO sub-division 4R harvested the lowest number of fish per day each (3.6 fish).

About 6\% of adult anglers who fished caught no cod at all. Almost 50\% of adult anglers who fished caught their limit of 5 fish per day fished. These adult anglers accounted for $47 \%$ of days fished and almost 58\% of all cod harvested.

Table 15 Average number of cod caught per day, by age category, by NAFO sub-division of activity.

| NAFO <br> sub-division | Cod catch per day |  |  |
| :--- | :---: | :---: | :---: |
|  | $<\mathbf{1 6}$ | $\mathbf{1 6} \boldsymbol{+}$ | Total |
|  |  |  |  |
| 2J | 2.0 | 4.0 | 3.8 |
| 3K | 3.2 | 3.8 | 3.7 |
| 3L | 3.7 | 4.2 | 4.1 |
| 3Pn | 2.2 | 4.6 | 4.4 |
| 3Ps | 3.3 | 4.4 | 4.3 |
| 4R | 2.6 | 3.6 | 3.5 |
|  |  |  |  |
| Total | 3.4 | 4.1 | 4.0 |

Almost 52\% of all cod harvested by adult anglers were taken by anglers fishing six days or less (Chart 5). These anglers accounted for over $50 \%$ of the total effort expended in 2007 fishing for cod in the recreational cod fishery of NL. Anglers who fished 20 days fished for a total of almost 37,000 days and caught a total of almost 135,000 cod (or just under 4 each per day)

Chart 5 Distribution of total effort and total cod harvest for adult anglers, by days fished for cod.

Based on the estimated total number of cod harvested (1.2 million), we can further estimate the approximate weight of cod caught in 2007. Using an average weight of cod of 2.02 kilograms as estimated by C\&P, the weight of cod harvested in the recreational cod fishery was about 2,438 tonnes. Table 16 shows the number and the approximate weight of cod landed by NAFO subdivision.

Table 16 Estimated number and weight of cod caught, by NAFO sub-division of activity.

| NAFO <br> sub-division | Cod caught in 2007 |  |
| :--- | ---: | ---: |
|  | Number | Weight (mt) |
|  |  |  |
| 2J | 11,555 | 23.3 |
| 3K | 280,794 | 567.2 |
| 3L | 726,813 | $1,468.2$ |
| 3Pn | 18,124 | 36.6 |
| 3Ps | 107,589 | 217.3 |
| 4R | 61,794 | 124.8 |
|  |  |  |
| Total | $1,206,669$ | $2,437.5$ |

## Wolffish

Adult anglers who fished in the Newfoundland and Labrador recreational cod fishery in 2007 were asked if they had caught any wolffish. The purpose of this question was to establish the number of incidental wolffish interceptions that occurred in the 2007 recreational cod fishery. Under the Species at Risk Act, wolffish which are caught are to be safely returned to the water (if possible). In commercial fishing operations, wolffish that are intercepted without successful return to the water must be reported and the fisher issued with an incidental harm permit.

In the recreational fishery, an estimated 1,600 anglers reported catching wolffish during the course of their cod fishing activities. They reported that they caught a total of 3,601 wolffish, of which they returned all to the water successfully. It may be assumed that the rate of incidental harm in the recreational fishery is extremely low as a result of the findings in this survey.

## APPENDIX A

## Survey Methodology and Data Quality

This section outlines the full methodology used in the 2007 Survey of the Recreational Cod Fishery of Newfoundland and Labrador.

In the absence of a licence to fish for cod and, with it, any associated reporting mechanisms to follow up after the fishing season, a household survey of residents of Newfoundland and Labrador had to be undertaken. This was the only possible way of successfully assessing the numbers of anglers, the days fished, cod caught, etc. The procedures carried out to ensure a successful survey are discussed below.

The survey fieldwork was carried out by Bristol Omnifacts Research, a major research firm, located in St. John's, NL.

## Sampling

As explained in the Survey Overview section, a random sample of households was interviewed in each of Statistics Canada's Census Divisions in the province (Divisions 10 and 11, which comprise Labrador were treated as a single Census Division). For the ease of reporting results from the survey, these Census Divisions were grouped into six specific geographic areas (see Figure 1).

## Data Collection, Processing, Coding and Estimation

The survey was launched on October 18, 2007, within a week and a half of the closing date of the recreational cod fishing season. Press Releases and news items before and during the season included references to the post-season survey whenever possible, so anglers in the province were fully aware that the survey would be undertaken. The survey was conducted by telephone, with the interview lasting between three minutes for households in which no one had fished recreationally for cod and five minutes if anglers in the household had participated in the 2007 recreational cod fishery.

While most coding was provided on the documents, answers relating to where anglers had fished for cod were post-coded into bays and coastal areas, based on responses provided by respondents. Many bays around the province carry the same name, despite being located in diverse areas. Hence, for post-coded bays, entries had to be assessed to ensure that the specific bay identified was the most likely area fished by respondents. A combination of the bay name and the telephone number prefix of the respondent were used in combination to determine cases where there might have been miscoding based on bay name alone. Only a few number of responses had to be corrected, based on an unlikely location for fishing activity when compared to the residence location. In all instances, a bay with the same name was located near the residence location. For example, there are three bays called Bonne Bay: one on the west coast, one on the south coast and a third at the tip of the Northern Peninsula. The Bonne Bay referred to in the post-coded bays was the one on the west coast of the province. While possible, it was considered highly unlikely that an angler living in the Burin or Hermitage Districts would be fishing for cod on the west coast of the province.

A major requirement in the editing and coding phase was verification that the information provided by anglers was both reasonable and sound for the numbers of anglers in the household and for the information related to the recreational cod fishery. This included assessing the number of fish caught, the number of cod caught compared to days fished, the number of
individuals in the household, males and females in the household balancing with total numbers of individuals, etc. There were no responses that were changed due to unexpected or unreasonable data provided during the interviews. As well, no responses were deemed suspect as being out of scope for the fishery. For example, the total number of days the fishery was open was 35 , but the maximum number of days fished was reported at 20 . Similarly, anglers could have harvested a maximum of 175 cod during the season and no angler reported exceeding this number. It should be noted that in those instances where anglers reported more than 5 fish per day being harvested, no attempt was made to "make the catch legal" (i.e., 5 fish). These responses were accepted at face value in light of the assurances anglers were given guaranteeing anonymity in the survey.

The required programming to produce survey estimates consisted of:

- systematic editing procedures;
- substitution algorithms for missing data (only age in this survey);
- data output programs covering all data collected; and
- special output programs for publication purposes.

## Weighting Procedures

Weighted estimates were produced to ensure that the raw survey data reflected estimates for the population of Newfoundland and Labrador. The multi-step process for weighting the results of the survey is as follows:

- as shown in Table A.1, calculate household weights for the 10 Census Divisions used in the survey by dividing the number of households reported for each Census Division by the number of households in the sample

Table A. 1 Household weights developed for the 2007 Survey of the Recreational Cod Fishery in NL

| Census Divisions | Number of <br> households | Households <br> sampled | Household <br> weight |
| :--- | ---: | ---: | ---: |
| Division 1 - Avalon Peninsula | 97,015 | 1,409 | 68.8538 |
| Division 2 - Burin | 8,710 | 404 | 21.5594 |
| Division 3 - South Coast | 6,895 | 405 | 17.0247 |
| Division 4 - Southwest | 8,720 | 401 | 21.7456 |
| Division 5 - West Central | 15,925 | 405 | 39.3210 |
| Division 6 - Central | 14,230 | 405 | 35.1358 |

| Division 9 - Northern Peninsula | 6,995 | 406 | 17.2291 |
| Division 10 - Labrador | 9,240 | 404 | 22.8713 |
| Total |  |  |  |

Source: Statistics Canada.

- the household weights were applied to the information collected on individuals during the interviews
- the estimated numbers of males and females, under 16 years of age, in total and the number who fished as well as the number of males and females over 16 years of age, in total and the number who fished, were calculated
- the total number of males and females were compared to the estimated population information provided by Statistics Canada from the 2006 Census of Canada, with the purpose of adjusting the estimated numbers of anglers, based on the rates of activity found in each group in each Census Division (Table A.2)

Table A. 2 Initial estimates of population and angler numbers, for males and females 16+, by Census Division

| Census <br> Divisions | Males 16+ |  |  | Females 16+ |  |  |

| Total | 833 | 41,964 | -- | 283 | 23,479 | -- |

- the above weights were used to produce population estimates of effort and harvest in the 2007 recreational cod fishery as well as estimates of wolffish interceptions in the fishery
- a slightly different approach for anglers under 16 years of age was required since the information calculated using household weights resulted in total numbers of males and females. This required that estimates of effort and harvest in the 2007 recreational cod fishery be derived by calculating days fished per angler and fish caught per angler by sex and then applying these averages to the estimated number of male and female anglers under 16 years of age

## Explanation:

In Census Division 1, the original estimates for males under 16 years of age were:
24,944 males, with 2,341 fishing 8,262 days and catching 35,322 cod
However, from Census data, we know that the number of males under 16 years of age in Census Division 1 was 21,651, thereby requiring that the number of anglers be reduced to 2,028 . From the original estimates for these anglers, they fished about 3.5 days each and caught 15.1 cod each. Hence, for this Census Division, the estimates of days fished and cod caught by males under 16 years of age were calculated as 7,158 days and 30,598 cod, respectively.

Tables A.5a/b on page 20 and Tables A. $6 \mathrm{a} / \mathrm{b}$ on page 21 provide detailed estimates and adjustments for male and female anglers under 16 years of age.

No adjustments were made to reflect the minor change of approximately 1,000 individuals in the population of Newfoundland in 2007.
A.5a Initial Estimates for Males Under 16 Years of Age

## * based on the 2006 Census of Canada <br> ** proportional allocation based on initial estimates

*** based on averages found in initial estimates

As was done for under-age male anglers, the adjusted estimates found above were used to allocate activity and harvest to residence areas and to NAFO areas of effort and catch for female anglers under 16 years of age.

## Data Quality

## Sampling Error

Information on reliability is presented in terms of the coefficient of variation of the mean, at one standard deviation. Because exact estimates of variance cannot be calculated, the coefficient of variation of the mean is used as a proxy for the assessing the variability of the data. Table A. 7 presents the statistical reliability of key variables for various presentations of the data.

The ranges of coefficient of variation (c.v.) below provide guidelines as to the use of the data:

| Coefficient of variation | Guideline |
| :--- | :--- |
| less than $16.5 \%$ | Data can be used without condition |
| $16.5 \%$ to $33.5 \%$ | Data should be used with caution |
| greater than $33.5 \%$ | Data should be used with extreme caution |

Source: Statistics Canada.

Table A. 7 Coefficient of variation (in \%) for selected key variables for anglers aged 16 years of age and older

|  | Days fished | Cod caught |
| :--- | :---: | :---: |
| Residence Area |  |  |
| Avalon | 6.3 | 6.9 |
| Burin-South Coast | 6.9 | 8.1 |

| 3Pn | 7.3 | 18.1 |
| 3Ps |  | 8.6 |
| 4R | 2.9 | 9.1 |
|  |  | 3.3 |

## Non-Sampling Error

During the data collection phase, efforts were made to reduce the occurrence of non-sampling errors in the survey. These efforts included a complete verification of the reported data, validity and consistency edits.

One source of non-sampling error that is not considered to play a significant role in this survey is errors introduced due to recall issues related to effort or catch. The time between fishing activity and the survey was no more than three months, limiting any short-term recall regarding the angling activity in 2007.

## Data Limitations

Despite all efforts to improve data accuracy, the survey results have limitations. Understanding these limitations will help the reader make informed decisions before conducting further research and analysis using the estimates in this report:

1. Estimates of cod fishing effort and harvest reported for age groups by either residence area or by areas fished will have reduced reliability
2. Data tables presented by bay or coastal area are for information purposes only as the survey was not designed to produce data at this level. Reliability levels are presented in Table A.8.

Table A. 8 Coefficient of variation (in \%) for selected key variables for anglers aged 16 years of age and older

| BaylCoastal Area | Days | Cod |
| :--- | ---: | ---: |
|  |  |  |
| Trinity Bay | 7.1 | 7.8 |
| Notre Dame Bay | 7.7 | 7.9 |
| Bonavista Bay | 7.8 | 9.6 |

| W\&N of Port aux Basques | 53.5 | 45.0 |
| St. Mary's Bay |  |  |

## Data comparability

The 2007 survey results are relatively comparable with the results for cod fishing by residents of Newfoundland and Labrador from the 2000 Survey of Recreational Fishing in Canada (SRF) and the 2001 Log Book Recall Assessment for Newfoundland and Labrador. Although not directly comparable, data on cod fishing in NAFO sub-division 3Ps in 2005, from the 2005 Survey of Recreational Fishing in Canada, and the 2007 results are reasonably close. These comparisons are provided in Table A. 9 below.

Table A. 9 Comparison of cod fishing information from previous surveys to the results of the 2007 survey (with age coverage noted)

| Source | Catch | Weight** | 3Ps |
| :--- | :---: | :---: | :---: |
|  |  | $\mathbf{m t}$ | $\#$ |
| 2000 SRF - anglers 18+ |  |  |  |
| 2001 Logbook - anglers 16+ | $1,013,428$ | $2,432.2$ | -- |
| 2005 SRF (3Ps only) - anglers 18+ | $1,166,667^{*}$ | $2,800.0$ | -- |
|  | -- | -- | 94,299 |
| 2007 Survey $-\mathbf{1 6 +}$ | $1,128,635$ | $2,279.8$ | 102,211 |

* Number of fish harvested is based on an average weight of 2.4 kilograms divided into the total weight estimate derived in 2001. Information on the specific number of cod caught was not available.

## APPENDIX B

## NEWFOUNDLAND AND LABRADOR 2007 SURVEY OF THE RECREATIONAL COD FISHERY

Hello, my name is $\qquad$ of Bristol Omnifacts Research and I am calling on behalf of the Department of Fisheries and Oceans. May I speak with a member of this household who is $\mathbf{1 6}$ years of age or older? Our company has been hired by the Department of Fisheries and Oceans to help them determine the number of people who fished in the recreational cod fishery in the province in 2007. Even if no one in your household participated in the recreational cod fishery in 2007, we need to obtain some very basic household information in order to complete this study. The questions I have will take between 2 and 5 minutes of your time.

Please note that this survey is completely anonymous. Only the information requested during this telephone session will be maintained in electronic form and only for analysis purposes.

Would you be willing to help on this study?
Yes (1) (if YES, continue)
No (2) (if NO, end interview and thank individual) (Refused=97).

## PART 1: HOUSEHOLD AND FISHING ACTIVITY - CHILDREN UNDER 16

The first part of this survey deals with questions about those in your household under the age of 16 .

1a). How many people under the age of 16 live in your household?
_ (if "0", go to QUESTION 2) (Refused=97)
1b). How many of these people are male? $\qquad$ (if "0",Continue) (Refused=97)

1c). Just to confirm, there is/are $<$ RECALL $1 \mathrm{~A}-1 \mathrm{~B}>$ female(s) under the age of 16 in your household? (if "0", go to QUESTION 2) (Refused=97)

1d). [PN: IF 1B=1, READ: Did the male under 16 fish in the recreational cod fishery in the province in 2007?; PN IF 1B>1 READ: How many of the <RECALL FROM 1B> males under 16 fished in the recreational cod fishery in the province in 2007?
$\qquad$ (if "0", go to Part 1h) (Refused=97)

1e). As best as you can estimate, how many days in total did they/he fish for cod? [Interviewer note: for Q1e to Q1g, they=MALES UNDER 16 in the household] Cod days $\qquad$ (IF Refused=97/Don’t Know=98, TERMINATE INTERVIEW)
1f). How many cod in total did they/he harvest in the province in 2007? Cod harvested $\qquad$ (IF Refused=97/Don't Know=98, TERMINATE INTERVIEW)

1g). Where did most of the activity and harvest occur? (bay, town or coastal area):
Bay (__ $)$ Town (__ ) Coastal (__ $)$
(Refused=97/ Don't know=98)

1h). [PN: IF 1c=1, READ: Did the female under 16 fish in the recreational cod fishery in the province in 2007?; PN IF 1c>1 READ: How many of the <RECALL 1c> females under 16 fished in the recreational cod fishery in the province in 2007?
$\qquad$ (if "0", go to QUESTION
2) (Refused=97/Don’t know=98)

1i). As best as you can estimate, how many days in total did they/she fish for cod? [Interviewer note: for Q1i to Q1k, they=FEMALES UNDER 16 in the household]

Cod days $\qquad$ (IF Refused=97/Don't Know=98, TERMINATE INTERVIEW)

1j). How many cod in total did they/she harvest in the province in 2007 ? Cod harvested $\qquad$ (IF Refused=97/Don't Know=98, TERMINATE INTERVIEW)

1 k ). Where did most of the activity and harvest occur (bay, town or coastal area):
Bay (__ $)$ Town (__ ) Coastal (__ $)$
(Refused=97/Don't Know=98)

PART 2: HOUSEHOLD AND FISHING ACTIVITY - ADULTS 16 YEARS AND OLDER

Now we'd like you to think about those 16 years of age or older in your household.
2a). Including yourself, how many people 16 years of age or older live in your household?
$\qquad$ (Refused=97)

2b). How many of these people are male? $\qquad$ (if "0", go to Part 2d) (Refused=97)

2c). How many of these males fished in the recreational cod fishery in the province in 2007?
___ (IF Refused=97/Don’t Know=98, TERMINATE INTERVIEW)
2d). Just to confirm, there are <RECALL 2a-2b> $\qquad$ females 16 years of age or older in the household?
(if "0", go to QUESTION 3) (Refused=97)
2e). How many of these females fished in the recreational cod fishery in the province in 2007?
(IF Refused=97/Don’t Know=98, TERMINATE INTERVIEW
[IF NO ONE IN THE HOUSEHOLD 16 YEARS OF AGE OR OLDER FISHED IN THE RECREATIONAL COD FISHERY IN NEWFOUNDLAND AND LABRADOR IN 2007, RECORD GENDER, THANK THE INDIVIDUAL FOR THEIR COOPERATION]
[IF ANYONE 16 YEARS OF AGE OR OLDER AND FISHED FOR RECREATION, COMPLETE THE NEXT SERIES OF QUESTIONS]

PART 3: FISHING ACTIVITY - RANDOMLY SELECTED ADULT FISHER 16 YEARS AND OLDER

## [SELECT APPROPRIATE RESPONDENT BASED ON NEXT BIRTHDAY]

For the remaining section of this survey, I am required to speak with a person in your household 16 years of age or older who fished in the recreational cod fishery in the province in 2007. If there is more than one person in your household matching this description, I will need to speak with the person who will next celebrate their birthday. Would that be you or someone else?

S1 INTERVIEWER RECORD: Person on the phone is the person who fished AND whose birthday comes next.

Correct person on the phone Someone else

GO TO Q3
CONTINUE

S2. Who would that be? RECORD NAME $\qquad$

S3. Is <RECALL NAME> available now?
Yes CONTINUE
No SET CALL BACK TIME
[IF DIFFERENT PERSON COMES TO THE PHONE, RE-INTRODUCE YOURSELF AND THE TOPIC OF THE STUDY]
3. How many days did you personally fish for cod in the recreational cod fishery in the province in 2007?

Days fished $\qquad$ days (IF Refused=97/Don’t know=98, TERMINATE INTERVIEW)
4. How many cod did you personally harvest during the recreational cod fishery in the province in 2007?

Cod harvested __ cod (IF Refused=97/Don't know=98, TERMINATE INTERVIEW)
5. As near as you can remember, in which bay or near which town or on which coastal area of the province did you harvest most of your cod in the recreational cod fishery in the province in 2007?

Bay (__ $)$ Town (__ ) Coastal (__ $)$
(Refused=97)

6a. During your days fishing for cod did you personally harvest any wolffish during the recreational cod fishery in the province in 2007?
$\qquad$ No $\qquad$ Don’t know $\qquad$

6b. If yes, how many wolffish did you catch and how many did you successfully release back into the water during the recreational cod fishery in the province in 2007?

Number of wolffish $\qquad$ Number of wolffish released $\qquad$

Now, we have just one final question to help us categorize responses.
7. In what year were you born?

19 $\qquad$ IF REFUSED, ASK FOR CATEGORY
116-24 225-34

35-44
445-54
555-64
665 or older
7 Refused

INTERVIEWER RECORD: Respondent's sex?
Male $\qquad$ Female $\qquad$

THANK THE RESPONDENT FOR THEIR TIME AND FOR THE INFORMATION THEY HAVE PROVIDED. RESULTS FROM THE SURVEY WILL BE REPORTED BY DFO ON ITS WEBSITE IN EARLY 2008

Interviewer's Name: $\qquad$

Phone Number: $\qquad$

Month: $\qquad$ Day $\qquad$

Region: $\qquad$

CODE ASSIGNMENT: (Census Region and Respondent Number): $\qquad$

## APPENDIX C
